

CONNECTION TO A VACUUM VALVE PIT

Upon completion of the construction of the wastewater collection system, owners of existing structures will be given the opportunity to connect to the sewer system. The County will be responsible for constructing the vacuum sewer main and vacuum valve pit within the street right-of-way. The valve pit will serve two properties and will have two 4" sewer service that run from the valve pit to the property line. The sewer service will terminate at the property line. The actual service will be below ground and deep enough that a sewer service can be constructed from your house or building to the sewer service line.

HOMEOWNER'S RESPONSIBILITY

The homeowner will be responsible for constructing a gravity sewer service line that runs from the line running to the septic tank to the cleanout at the property line constructed by the County. See the sketch below for more detailed information. The sewer service line may be installed by a licensed plumber or by the property owner. Under the Town of Sunset Beach ordinance, the septic tank must be properly abandoned after connection to the sewer service.
